## 74LCX244

Low-Voltage Buffer/Line Driver
with 5V Tolerant Inputs and Oufputs

## General Description

The LCX244 contains eight non-inverting buffers with TRI-STATE ${ }^{\oplus}$ outputs. The device may be employed as a memory address driver, clock driver and bus-oriented transmitter/receiver. The LCX244 is designed for low voltage (3.3V) $\mathrm{V}_{\mathrm{CC}}$ applications with capability of interfacing to a 5 V signal environment.
The LCX244 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining CMOS low power dissipation.

## Features

- 5 V tolerant inputs and outputs
m Ideal for low power/low noise 2.7 to 3.6 V applications
- Power-down static overvoltage protection on inputs and outputs
- Outputs source/sink 24 mA
- Guaranteed simultaneous switching noise level
- Available in SOIC JEDEC, SOIC EIAJ and TSSOP
- Implements patented Quiet Series noise/EMI reduction circuitry
- Functionally compatible with the 74 series 244
- Latch-up performance exceeds 300 mA
- ESD performance: Human Body Model > 2000V; Machine Model > 250V

Ordering Code: See Section 11

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
Note 2: $I_{O}$ Absolute Maximum Rating must be observed.
