## 74LVQ138

## Low Voltage 1-of-8 Decoder/Demultiplexer

## General Description

The LVQ138 is a high-speed 1-of-8 decoder/demultiplexer. This device is ideally suited for high-speed bipolar memory chip select address decoding. The multiple input enables allow parallel expansion to a 1-of-24 decoder using just three LVQ138 devices or a 1-of-32 decoder using four LVQ138 devices and one inverter.

## Features

- Ideal for low power/low noise 3.3V applications
- Guaranteed simultaneous switching noise level and dynamic threshold performance
- Improved latch-up immunity
- Guaranteed incident wave switching into $75 \Omega$
- 4 kV minimum ESD immunity
- Demultiplexing capability
- Multiple input enable for each expansion
- Active LOW mutually exclusive outputs
- MIL-STD-883 54AC products are available for Military/ Aerospace applications

Ordering Code: See Section 11

## Functional Description

The LVQ138 high-speed 1-of-8 decoder/demultiplexer accepts three binary weighted inputs ( $A_{0}, A_{1}, A_{2}$ ) and, when enabled, provides eight mutually exclusive active-LOW outputs $\left(\overline{\mathrm{O}}_{0}-\mathrm{O}_{7}\right)$. The LVQ138 features three Enable inputs, two active-LOW ( $\mathrm{E}_{1}, \mathrm{E}_{2}$ ) and one active-HIGH ( $\mathrm{E}_{3}$ ). All outputs will be HIGH unless $\bar{E}_{1}$ and $\bar{E}_{2}$ are LOW and $E_{3}$ is HIGH. This multiple enable function allows easy parallel ex-
pansion of the device to a 1-of-32 ( 5 lines to 32 lines) decoder with just four LVQ138 devices and one inverter (see Figure 1). The LVQ138 can be used as an 8-output demultiplexer by using one of the active LOW Enable inputs as the data input and the other Enable inputs as strobes. The Enable inputs which are not used must be permanently tied to their appropriate active-HIGH or active-LOW state.

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
