

FUNCTIONAL DESCRIPTION - The ' 153 is a dual 4 -input multiplexer. It can select two bits of data from up to four sources under the control of the common Select inputs $\left(\mathrm{S}_{0}, \mathrm{~S}_{1}\right)$. The two 4 -input multiplexer circuits have individual active LOW Enables ( $\bar{E}_{a}, \bar{E}_{b}$ ) which can be used to strobe the outputs independently. When the Enables ( $\overline{E_{a}}, \bar{E}_{b}$ ) are HIGH, the corresponding outputs $\left(Z_{a}, Z_{b}\right)$ are forced LOW. The ' 153 is the logic implementation of a 2-pole, 4-position switch, where the position of the switch is determined by the logic levels supplied to the two Select inputs. The logic equations for the outputs are shown below.

$$
\begin{aligned}
& Z_{a}=\bar{E}_{a} \cdot\left(l_{0 a} \cdot \bar{S}_{1} \cdot \bar{S}_{0}+l_{1 a} \cdot \bar{S}_{1} \cdot S_{0}+l_{2 a} \cdot S_{1} \bullet \bar{S}_{0}+l_{3 a} \cdot S_{1} \cdot S_{0}\right) \\
& Z_{b}=\bar{E}_{b} \bullet\left(l_{0 b} \bullet \bar{S}_{1} \bullet \bar{S}_{0}+l_{1 b} \bullet \bar{S}_{1} \bullet S_{0}+l_{2 b} \bullet S_{1} \bullet \bar{S}_{0}+l_{3 b} \bullet S_{1} \bullet S_{0}\right)
\end{aligned}
$$

The ' 153 can be used to move data from a group of registers to a common output bus. The particular register from which the data came would be determined by the state of the Select inputs. A less obvious application is a function generator. The '153 can generate two functions of three variables. This is useful for implementing highly irregular random logic.
