# 4-BIT BINARY FULL ADDER (LOOK AHEAD CARRY) 

DIGITAL 54/74 TTL SERIES

DESCRIPTION
The $54 / 7483$ is a 4-Bit Binary Full Adder for adding two four bit binary numbers. A Carry Look Ahead circuit is included to provide minimum carry propagation delays.

Propagation delays of carry-in to carry-out is typically 12 nsec.
TRUTH TABLE

| INPUT |  |  |  | OUTPUT |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 1 | 1 | 1 | 1 | 0 | 1 | 1 | 1 | 1 | 1 |

NOTES:
Input conditions at $A_{1}, A_{2}, B_{1}, B_{2}$, and $C_{0}$ are used to determine outputs $\Sigma_{1}$ and $\Sigma_{2}$, and the value of the internal carry $C_{2}$. The

PIN CONFIGURATIONS

values at $C_{2}, A_{3}, B_{3}, A_{4}$, and $B_{4}$, are then used to determine outputs $\Sigma_{3}, \Sigma_{4}$, and $\mathrm{C}_{4}$.

$\dagger \quad T_{p d 1}$ is propagation delay time to logical 1 level. $t_{p d O}$ is propagation delay time to logical 0 level.

- For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable circuit type.
** All typical values are at $V_{C C}=5 \mathrm{~V}, T_{A}=25^{\circ} \mathrm{C}$.
+ Not more than one output should be shorted at a time.
NOTE 1: These voltage values are with respect to network ground terminal.
