DIGITAL 54/74 TTL SERIES

## PIN CONFIGURATIONS

The S5492/N7492 is completely compatible with Series 54 and Series 74 logic families. Average power dissipation is 155 mW .

## DESCRIPTION

The S5492/N7492 is a high-speed monolithic 4-bit binary counter consisting of four master-slave flip-flops which are internally interconnected to provide a divide-by-two counter and a divide-by-six counter. A gated direct reset line is provided which inhibits the count inputs and simultaneously returns the four flip-flops outputs to a logical 0. As the output from flip-flop A is not internally connected to the succeeding flip-flops the counter may be operated in two independent modes:

1. When, used as a divide-by-twelve counter, output $A$ must be externally connected to input BC. The input count pulses are applied to input $A$. Simultaneous division of 2, 6, and 12 are performed at the $A, C$, and $D$ outputs as shown in the truth table.
2. When used as a divide-by-six counter, the input count pulses are applied to input BC. Simultaneously, frequency division of 3 and 6 are available at the $C$ and $D$ outputs. Independent use of flip-flop $A$ is available if the reset function coincides with reset of the divide-bv-six counter.

TRUTH TABLE (See Notes 1 and 2)

| COUNT | OUTPUT |  |  |  |
| :---: | :---: | :---: | :---: | :---: |

| 9 | 1 | 0 | 1 | 1 |
| 10 | 1 | 1 | 0 | 0 |
| 11 | 1 | 1 | 0 | 1 |

## NOTES:

1. Output A connected to input B
2. To reset all outputs to logical 0 . both $\mathrm{R}_{\mathrm{O}(1)}$ and $\mathrm{R}_{\mathbf{O ( 2 )}}$ inputs must be at logical 1.

[^0]:    - For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable device type.
    - All typical values are at $V_{C C}=5 \mathrm{~V}, \mathrm{~T}_{A}=25^{\circ} \mathrm{C}$.
    $t$ Not more than one output should be shorted at a time.
