

SINGLE AND DUAL LOW NOISE OP AMP NE5533/5533A/SA/SE/NE5534/5534A

DESCRIPTION

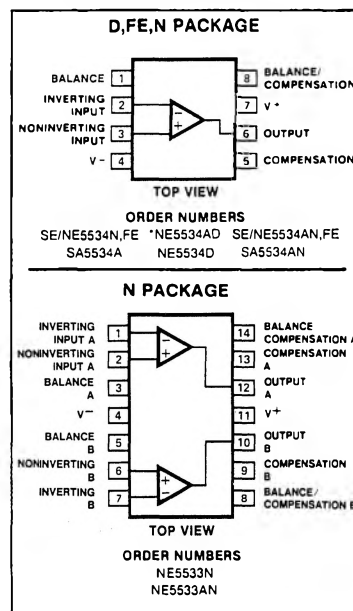

The 5533/5534 are dual and single high-performance low noise operational amplifiers. Compared to other operational amplifiers, such as TL083, they show better noise performance, improved output drive capability and considerably higher small-signal and power bandwidths.

This makes the devices especially suitable for application in high quality and professional audio equipment, in instrumentation and control circuits and telephone channel amplifiers. The op amps are internally compensated for gain equal to, or higher than, three. The frequency response can be optimized with an external compensation capacitor for various applications (unity gain amplifier, capacitive load, slew-rate, low overshoot, etc.) If very low noise is of prime importance, it is recommended that the 5533A/5534A version be used which has guaranteed noise specifications.

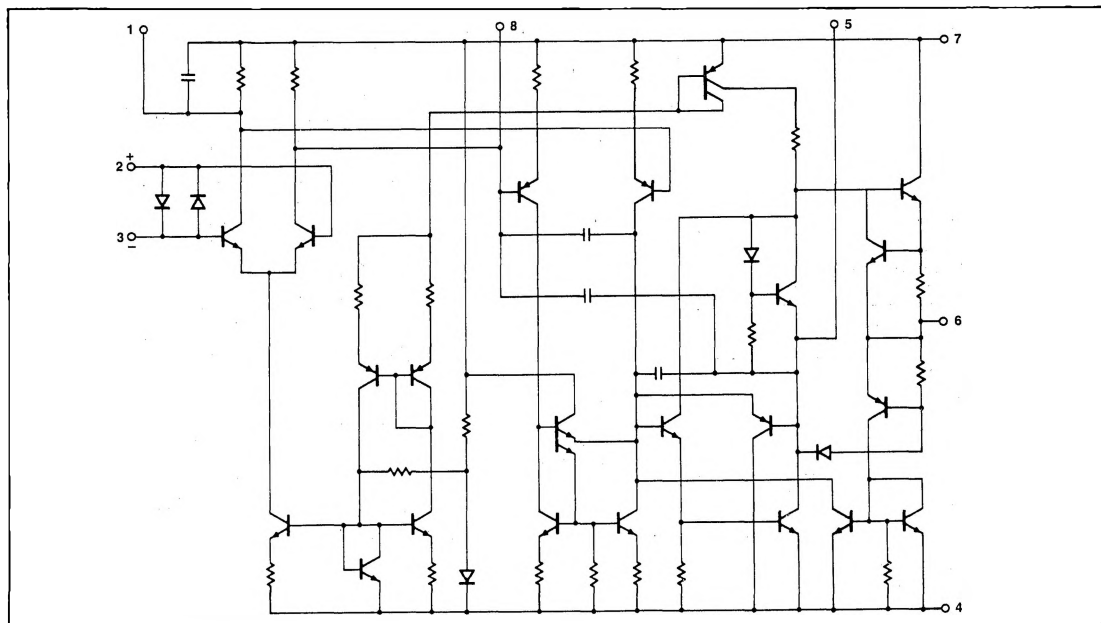

FEATURES

- Small-signal bandwidth: 10MHz
- Output drive capability: 600Ω, 10V (rms) at $V_s = \pm 18V$
- Input noise voltage: $4nV/\sqrt{Hz}$
- DC voltage gain: 100000
- AC voltage gain: 6000 at 10kHz
- Power bandwidth: 200kHz
- Slew-rate: 13V/ μs
- Large supply voltage range: ± 3 to $\pm 20V$

PIN CONFIGURATIONS

EQUIVALENT SCHEMATIC

*NOTE:

This device may not be symbolized in standard format.

SINGLE AND DUAL LOW NOISE OP AMP NE5533/5533A/SA/SE/NE5534/5534A

ABSOLUTE MAXIMUM RATINGS

PARAMETER	RATING	UNIT
V_S Supply voltage	± 22	V
V_{IN} Input voltage	$\pm V$ supply	V
V_{DIFF} Differential input voltage ¹	± 0.5	V
T_A Operating temperature range		
SE5534/5534A	-55 to +125	°C
NE5533/5533A/5534/5534A	0 to +70	°C
T_{STG} Storage temperature	-65 to +150	°C
T_J Junction temperature	150	°C
P_D Power dissipation at 25°C ²		
5533N, 5534N, 5534FE	800	mW
Output short circuit duration ³	Indefinite	
Lead temperature (soldering, 10 sec)	300	°C

NOTES

- Diodes protect the inputs against over-voltage. Therefore, unless current-limiting resistors are used, large currents will flow if the differential input voltage exceeds 0.6V. Maximum current should be limited to ± 10 mA.
- For operation at elevated temperature, derate packages based on the following junction-to-ambient thermal resistances:
 - 8-pin ceramic (FE) 140°C/W
 - 14-pin ceramic (F) 110°C/W
 - 8-pin plastic (N) 162°C/W
 - 14-pin plastic (N) 150°C/W
- Output may be shorted to ground at $V_S = \pm 15$ V, $T_A = 25^\circ\text{C}$. Temperature and/or supply voltages must be limited to ensure dissipation rating is not exceeded.

DC ELECTRICAL CHARACTERISTICS $T_A = 25^\circ\text{C}$, $V_S = \pm 15$ V unless otherwise specified.^{1,2}

PARAMETER	TEST CONDITIONS	SE5534/5534A			NE5533/5533A 5534/5534A			UNIT
		Min	Typ	Max	Min	Typ	Max	
V_{OS} Offset voltage			0.5	2		0.5	4	mV
