## Operational Amplifiers

## NH0001 low power operational amplifier general description

The NH0001 is a general purpose operational amplifier designed for extremely low quiescent power. Typical NO-load dissipation at $25^{\circ} \mathrm{C}$ is 2 milliwatts at $V_{S}= \pm 15$ volts, and 0.5 milliwatts at $V_{S}= \pm 5$ volts. Even with this low power dissipation, the NH0001 will deliver $\pm 10$ volts into a 2 K load with $\pm 15$ volt supplies, and typical short circuit currents of 20 to 30 milliamps. Additional features are:

- Operation from $\pm 5 \mathrm{~V}$ to $\pm 20 \mathrm{~V}$
- Very low offset voltage: typically $200 \mu \mathrm{~V}$ at $25^{\circ} \mathrm{C}, 600 \mu \mathrm{~V}$ at $-55^{\circ} \mathrm{C}$ to $125^{\circ} \mathrm{C}$
- Very low input offset current: typically 3 nA at $25^{\circ} \mathrm{C}, 6 \mathrm{nA}$ at $-55^{\circ} \mathrm{C}$
- Low noise: typically $3 \mu \mathrm{~V}$ rms
- Frequency compensation with 2 small capacitors
- Output may be clamped at any desired level
- Output is continuously short circuit proof

The NH0OO1 is ideally suited for space borne applications or where battery operated equipment requires extremely low power dissipation.

## schematic and connection diagrams

COMPENSATION

TOP VIEW

Note: Pin 7 must be grounded or connected to a voltage at least 5 volts more negative than the positive supply ( P in 9 ). P in 7 may be connected to the negative supply, however the standby current will be increased. A resistor may be inserted in series with Pin 7 up to a maximum of $100 \mathrm{k} \Omega 2$ per volt between $P_{\text {in }} 3$ and $\mathrm{Pin}^{9}$

## typical applications

## Voltage Follower

Integrator with Bias Current Compensation

Voltage Comparator for Driving MOS Circuits

External Current Limiting Method

lout $\leq \frac{V_{f}^{*}}{\mathbf{R}_{\text {LIM }}}$
$\mathrm{V}_{\mathrm{f}}=$ average forward
voltage drop of at 20 to $50 \mu \mathrm{~A}$.

| Average Temperature Coefficient of Offset Voltage | -55 to 125 | $\mathrm{R}_{\mathrm{S}} \leq 5 \mathrm{~K}$ |  | 4 |  | $\mu \vee /{ }^{\circ} \mathrm{C}$ |
| Average Temperature Coefficient of Bias Current | -55 to 125 |  |  | 0.4 |  | $\mu \mathrm{A} /{ }^{\circ} \mathrm{C}$ |
| Equivalent Input Noise Voltage | 25 | $\mathrm{R}_{\mathrm{S}}=1 \mathrm{~K}, \mathrm{f}=5 \mathrm{~Hz}$ to $1000 \mathrm{~Hz}, \mathrm{~V}_{\mathrm{S}}= \pm 15 \mathrm{~V}$ |  | 3.0 |  | $\mu \vee \mathrm{rms}$ |

Note 1: Based on maximum short circuit current of 50 mA , device may be operated at any combination of supply voltages, and temperature to be within rated power dissipation (see Curve).
Note 2: These specifications apply for Pin 7 grounded, for $\pm 5 \mathrm{~V} \leq V_{S} \leq \pm 20 \mathrm{~V}$, with Capacitor $\mathrm{C} 1=39$ pF from Pin 1 to $\operatorname{Pin} 10$, and $\mathrm{C} 2=22$ pF from Pin 5 to ground, unless otherwise specified
