## Operational Amplifiers

## NH0005/NH0005A operational amplifier

## general description

The NH0005/NH0005A is a hybrid integrated circuit operational amplifier employing thick film resistors and discrete silicon semiconductors in its design. The select matching of the input pairs of transistors results in low input bias currents and a very low input offset current, both of which exhibit excellent temperature tracking. In addition, the device features:

- Very high output current capability: $\pm 50 \mathrm{~mA}$ into a 100 ohm load
- Low standby power dissipation: typically 60 mW at $\pm 12 \mathrm{~V}$
- High input resistance: typically 2 M at $25^{\circ} \mathrm{C}$

## typical applications

Offset Balancing Circuit

*Typical value, $\mathrm{R}_{\mathrm{B}}=\mathbf{1 0 0 K}$.
$R_{B}$ may be increased for greater
sensitivity with reduction in range.

Integrator with Bias Current Compensation

## absolute maximum ratings

| Supply Voltage | $\pm 20 \mathrm{~V}$ |
| :--- | ---: |
| Power Dissipation (see Curve) | 400 mW |
| Differential Input Voltage | $\pm 15 \mathrm{~V}$ |
| Input Voltage | Equal to supply voltages |
| Peak Load Current | $\pm 100 \mathrm{~mA}$ |
| Storage Temperature Range | $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |
| Operating Temperature Range | $-55^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$ |
| Lead Temperature (soldering, 20 sec ) | $300^{\circ} \mathrm{C} ; 1 / 16^{\prime \prime}$ from package |
