T-75-07-07

UM91260/61

10 Memory Tone/Pulse Dialer

Features

- 32-digit redial memory (31 digits in tone mode)
- Ten indirect memories, 16 digits in pulse mode, 15 digits in tone mode
- Tone/Pulse mode switching via slide switch (4.1 second pause inserted automatically)
- Wide operating voltage: 1.8V ~ 5.5V
- Uses 480 KHz ceramic resonator

- Low memory retention current ($\leqslant 0.1$ μA at V_{DD} = 10V, $\overline{HK}$ = 1)
- Selectable Make/Break ratio
- Selectable dialing rate (UM91261 only)
- Key-in tone output for valid keypad entry recognition (UM91261 only)

General Description

The products in the UM91260/61 series are tone/pulse switchable dialers with ten 16-digit number memories and 32-digit redial memory. Pulse to tone mode switching is performed via a slide switch. The dialing rate and storage mode for each version of the UM91260 is shown at right. The UM91261 is a 22-pin version of the 91260 with key-in tone output and selectable dialing rate and storage mode.

Ordering Information

| Part No.	Dialing rate	Storage mode	Package

Absolute Maximum Ratings*

Power Supply Voltage . . . . −0.3V to +6.0V
Input Voltage. . . . . −0.3V to V_{DD} + 0.3V
Maximum Power Dissipation (at 25°C) . . . . 500 mW
Operating Temperature (T_{OP}) . . . . −20°C to +70°C
Storage Temperature (T_{STG}) . . . . −55°C to +150°C

*Comments

Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only. Functional operation of this device at these or any other conditions above those indicated in the operational sections of this specification is not implied and exposure to absolute maximum rating conditions for extended periods may affect device reliability.

DC Characteristics   (V_{DD} = 3.5V, V_{SS} = 0V, F_{OSC} = 480 KHz, T_{OP} = 25°C, unless otherwise specified)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions	Test Ckt.
Operating Voltage	V_{DD}	1.8		5.5	V	Pulse mode	A

Pin Description

Pin No. 91260	Pin No. 91261	Designation	Description
1	1		
2	2	$\overline{R1} \sim \overline{R4}$	Key inputs.
3	3		When a row and a column are connected, a key operation is activated. If the On-Hook Store pin is inhibited, the row and column pins remain at high impedance in the On-Hook state. If the On-Hook Store pin is available, the column input is pulled low and the row input is pulled high. Scanning signals are present on both the row and column pins during a valid key-in condition. The key-in debounce time is typically 22 ms.
4	4		
15	19	$\overline{C1} \sim \overline{C4}$	
16	20		
17	21		
18	22		
5	5	$\overline{HK}$	Hook switch input. When $\overline{HK}$ = V_{DD}, an On-Hook state exists. When $\overline{HK}$ = V_{SS}, an Off-Hook state exists.
6	6	M/B	Dial pulse Make/Break ratio select input. If M/B = V_{DD}, the Make/Break ratio is 1/2. If M/B = V_{SS}, the Make/Break ratio is 2/3.

Pin Description (Continued)

T-75-07-07

Tone/Pulse Dialer

Pin No. 91260	Pin No. 91261	Designation	Description
—	7	DRS	Dialing rate select input. If DRS = V_{DD}, the dialing rate is 20 pps. If DRS = V_{SS}, the dialing rate is 10 pps.
7	8	MODE SELECT	Pulse/DTMF mode select input. If MODE SELECT = V_{DD}, Pulse mode is in effect. If MODE SELECT = V_{SS}, DTMF mode is in effect.
8 9	9 10	OSCI OSCO	Oscillator I/O. A 480 KHz ceramic resonator and two 100 pF serial loading capacitors form a complete oscillator circuit. The circuit is activated when $\overline{HK}$ is low. Oscillator start-up time is typically 10 ms. OSCI / OSCO — C = 100 pF, 480 KHZ, C = 100 pF
10 11	11 12	V_{DD} V_{SS}	Positive power supply. Negative power supply. Operating voltage range: Pulse mode = 1.8V to 5.5V DTMF mode = 1.8V to 5.5V
—	13	$\overline{KEY\text{-}TONE}$	Key-in tone output. This output is valid for both Pulse and Tone modes. Output frequency is 1.5 KHz and has a duration of 42.6 ms after a valid key-in is detected. This function is only available on the UM91261.
—	14	$\overline{OHI}$	On-Hook store. On-hook store function is available when this input is high, inhibited when this input is low.
12	15	TONE	DTMF signal output. Pull-down load resistance is 10,000Ω. The minimum tone and IDP durations are built-in for both normal dialing and redialing.
13	16	$\overline{X\,MUTE}$	Transmit mute output. This is an N-channel open drain output. The output transistor is switched on while a sequence of digits is being dialed (for both Pulse and Tone modes). Otherwise, it is switched off.
—	17	$\overline{MUTE}$	Mute output. This is an N-channel open drain output. The output transistor is switched on while a sequence of pulse digits is being dialed. Otherwise, it is switched off.
14	18	$\overline{DP}$	Dial pulse output. This pin is an N-channel open drain output. When $\overline{DP}$ output is low (switched on), it serves as a break signal in Pulse dialing. For other operations, $\overline{DP}$ output is normally high impedance (switched off).

Operational Procedures

9-1 Symbol definitions

a. D_P: Pulse digit, 1, 2, 3, 4, 5, 6, 7, 8, 9, 0

b. D_t: tone digit, 1, 2, 3, 4, 5, 6, 7, 8, 9, 0, *, #

c. LOCi: i = 1, 2, 3, 4, 5, 6, 7, 8, 9, 0

d. ZiZiZi: Conversation mode

e. $0{-}0\!\uparrow$: OFF-HOOK

f. $0{-}0\!\downarrow$: ON-HOOK

g. ⌐ : Input Level from Low to high

h. ⌐L : Input Level from High to Low.

9-2 Recommended dialing, redialing, mixed dialing and storing operations

1. Normal dialing in pulse mode

   $0{-}0\!\uparrow$, D_P ... D_P, ZiZiZi $0{-}0\!\downarrow$

2. Normal dialing in tone mode

   $0{-}0\!\uparrow$, D_t ... D_t, ZiZiZi $0{-}0\!\downarrow$

3. Mixed dialing in pulse-to-tone mode

   $0{-}0\!\uparrow$, D_P ... D_P MODE SELECT.

   ⌐L D_t ... D_t, ZiZiZi $0{-}0\!\downarrow$

4. Redialing

   $0{-}0\!\downarrow$, D_P ..... D_P $0{-}0\!\downarrow$, $0{-}0\!\uparrow$,

   R, ZiZiZi, $0{-}0\!\downarrow$

   $0{-}0\!\uparrow$, D_t ..... D_t $0{-}0\!\downarrow$, $0{-}0\!\uparrow$,

   R, ZiZiZi $0{-}0\!\downarrow$

5. Storing Numbers to Repertory Memory

   (i) Off-hook Store $0{-}0\!\uparrow$, Ⓢ, D_P ... D_P or D_t ... D_t

   Ⓐ/Ⓛ , LOCi, $0{-}0\!\downarrow$

   (ii) On/Off-hook store: $0{-}0\!\downarrow$, Ⓢ, D_P...D_P or D_t...D_t

   Ⓐ/Ⓛ , LOCi,

6. Dialing from Repertory Memory

   $0{-}0\!\uparrow$, Ⓐ/Ⓛ, LOCi, ZiZiZi $0{-}0\!\downarrow$

Functional Description

1. N-Channel Open Drain Output — $\overline{DP}$, $\overline{XMUTE}$, $\overline{MUTE}$,

Figure. 1

2. DTMF Generator

   The digitally synthesized sinewave of the UM91260 series is well designed, with a 6 level, 12 segment, $1/2\ V_{DD}$ reference voltage (see Fig. 2). The THD (Total Harmonic Distortion) of the DTMF output is typically 1%, when V_{DD} = 2.5V to 5.5V and frequency is in the 500 HZ to 3400 HZ band.

   DTMF Signal THD vs. operating voltage and DTMF output amplitude vs. operating voltage is shown in figures 3 and 4.
